

Weekly Report

Lu Junhua

November 30, 2014

Work has been done

1. I finished reading Chap8 and the very beginning of Chap9. In fact, the description or the explanation is too vague or obscure for me. I will read another book which gives me more details about different algorithms of statistical learning.
2. I finished about one third of a Scala tutorial. And put more practice in linux os.
3. There is no proress in Gong'an data. The R code was revised, but when I tested it, it showed a bad result to me.

Work to be done

1. Since Gu and Prof. Gu are back, we should have a good chat about the project. It won't take long time to run the r program so this week we can get the outcome of whether the model is suitable for these data.
2. Proceed learning scala.
3. I think I should read *the element of statistical learning* thoroughly from now on and taking notes. Still, many questions occured to me when I took the Discussion Class or lectures. It makes me very very upset and uncomfortable. So I should take actions to change this situation. I mentioned before that I must lay a solid foundation of the knowledge so that I can have more ideas to do future work. It's high time doing this work.
